Education

Bachelor of Computer Science   **Oct 2021 - Jul 2024**
Faculty of Natural Sciences, Tirana
Finishing my Bachelor's degree without delay, while also working at the same time was challenging, but I was able to keep up with my studies through independent work. During my time as a Computer Science student, I gained a foundational understanding of programming languages, data structures, algorithms, and software development methodologies. I learned how to write basic programs using languages such as Java, C and C++, as well as how to design and implement algorithms to solve complex problems. In addition I took web development courses and created simple websites using HTML, CSS and javascript. I also gained experience in working collaboratively with other students on programming assignments and projects, which helped me develop my communication and teamwork skills. Overall, my time as a Computer Science student taught me the importance of attention to detail, logical thinking, and persistence in problem-solving.

Experience

Angular Developer   **Nov 2024 - Present**
Blue Hat Shpk, Tirane
In my first role as an Angular Developer, I worked with the Ionic Framework to build cross-platform web and mobile applications using Angular, TypeScript, and Ionic UI components. During this time, I focused on learning best practices in front-end development, improving my skills in responsive design, API integration, and performance optimization. I gained hands-on experience debugging and testing applications, collaborating with team members, and understanding Agile development workflows. This role allowed me to develop a strong foundation in Angular and Ionic, enhancing my ability to build scalable and user-friendly applications.

Internships

DevOps Internship
TiranaIT
During my internship, I gained valuable insights into professional work environments and collaborative workflows. I became proficient with key tools such as Jira for project management, GitHub for version control, and Docker and Kubernetes for containerization and orchestration. Additionally, I developed skills in Linux and shell scripting, further enhancing my ability to manage and deploy applications efficiently. Collaborating closely with my teammates, I contributed to solving complex problems and navigating challenges together. This experience not only deepened my technical expertise but also strengthened my skills in communication and teamwork.

Independent Work

Front-End of E-commerce Website
I developed the front-end for **Krijime Zanash**, an e-commerce website showcasing my handmade jewelry. Utilizing React, I built dynamic

components to create an engaging and responsive user experience. The site leverages tools and technologies such as Tailwind CSS for modern styling, JSX and JavaScript for dynamic content rendering, and Google Fonts for custom typography. I also integrated React Icons to enhance the visual appeal and user interface. This project not only allowed me to showcase my jewelry but also demonstrated my ability to implement modern web technologies and design principles effectively.
